General Motors has decided that a defect which relates to motor vehicle safety exists in model year 2005-2007 Chevrolet Corvette

vehicles, when the engine is warm, the underhood bussed electrical center (UBEC) housing will expand, causing the headlamp low circuit routed wire to bend slightly. After the wire is repeatedly bent, it can fracture and separate. When this occurs, the low-beam lamp will not illuminate. As the UBEC housing cools and contracts, the low-beam headlamp function may return. This condition does not affect the headlamps, marker lamps, turn signals, daytime running lamps or fog lamps.
